

CUSTOMER TESTIMONIAL:

“This easy to learn, innovative technology takes the place of screening devices, providing the patient data needed for in-depth screening within about 90 seconds.”

Patti Barkey, COE
CEO Bowden Eye & Associates | Director of Dry Eye University

I believe that to experience growth and development in your practice, the focus needs to center around the patient. Patients want to be comfortable with what they spend on their vision care while also receiving quality care. Eye care professionals (ECPs) who integrate the latest technologies in vision healthcare will provide efficient, high quality care for their patients.

As I've focused the efforts of my practice's research on ocular surface disease symptoms and ways to provide enhanced patient care, I knew it was important to partner with leading experts in dry eye. Utilizing Luneau Technology's [Visionix® VX120+ Dry Eye](#) with patients has modernized our overall approach to practice efficiency. This easy to learn, innovative technology takes the place of four screening devices, providing the patient data needed for in-depth screening within about 90 seconds. The speed in which the exam is performed and the ability to delegate data collection reduces patient exam time while allowing the ECP to perform a high-quality consultation with patients.

The VX120+ Dry Eye is a powerful, in-depth approach to dry eye screening and can easily be integrated into practice workflow. Diagnosing and treating dry eye successfully demands involvement from the whole team and this technology is ideal for ECPs starting to address dry eye disease.

If you are a current customer, log in to the Luneau Technology Academy and view the Standardizing your Dry Eye Screening with the Visionix® VX120+ Dry Eye webinar under the Webinars tab <https://academy.luneautech.com/>.
